

# The BII Venture Lab Program

**BioInnovation Institute (BII) helps founders with research-based ideas build viable start-ups within human health and planetary health.**

## Are you ready to accelerate?

The objective of Venture Lab is to address early-stage technical and commercial risks while developing resilient founders with strong leadership capacity. The goal is to accelerate the scientific maturity of the innovation to attract further funding.

## What we offer

Located in Copenhagen, Denmark, BII offers office and laboratory facilities, business development support, access to mentoring and international networks, plus a risk-free convertible loan of EUR 500,000.

## Who can apply?

We are looking for projects with evidence-based ideas and a clear understanding of unique value proposition. Applicants do not need to have established a company by the time of application but must do so if approved.

## Where will I work?

We believe the best environment for your start-up is at BII, and most start-ups are located at our facilities in Copenhagen. If fulfilling this requirement is not possible, as may be the case for international start-ups, it is possible to apply for an exemption – please refer to the Applicant Guidelines.

## What is the duration of the program?

12 months (March 2025 – February 2026)

## Women's Health Focus Areas

We are looking for therapeutic solutions and evidence-based health tech approaches within the following areas:

**Female-specific conditions:** Gynecological diseases, menopause symptoms, maternal health, menstrual health.

**Reproductive health:** Contraception and infertility (male/female).

**Conditions that affect males and females differently:** Cardiovascular conditions, CNS indications, autoimmune diseases, mental health disorders.

## Special Opportunity in Collaboration with Ferring Pharmaceuticals

The Women's Health focus area features a special *Reproductive Medicine and Maternal Health Track* jointly supported by BII and Ferring Pharmaceuticals. The following focus areas are of interest:

- Reproductive medicine related to the treatment of female and male infertility.
- PCOS (polycystic ovary syndrome) and endometriosis.
- Pregnancy-related complications preeclampsia and pre-term birth.

### Deadline:

28 August 2024  
13:00 CET
